ONI and climate-threshold occurrences

MAIZE | Pearson correlation by phenological phase | 1981–2016

Establishment

EST

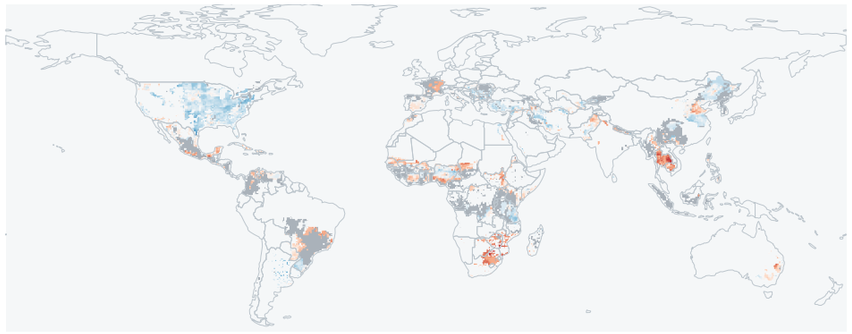

Daily Tmax ≥34 °C · ≥2 consecutive days

Vegetative growth

VEG

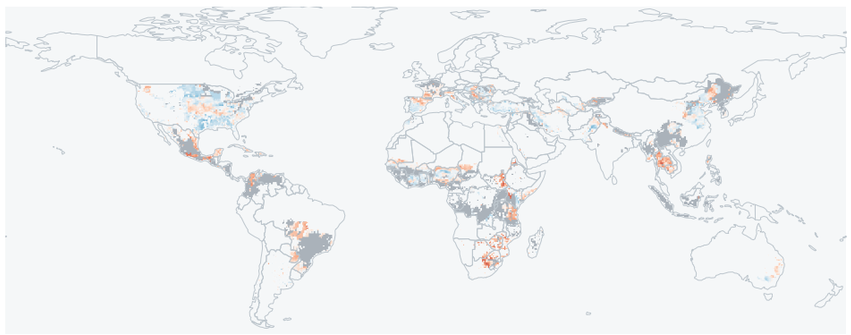

Daily Tmax ≥34.6 °C · ≥2 consecutive days

Reproductive development

REP

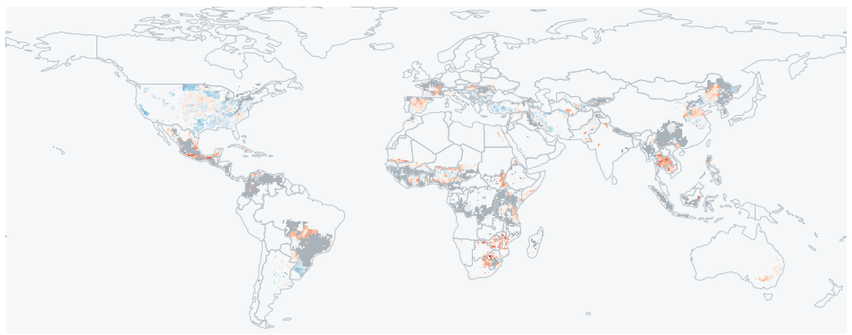

Daily Tmax ≥33.7 °C · ≥2 consecutive days

Flowering

FLO

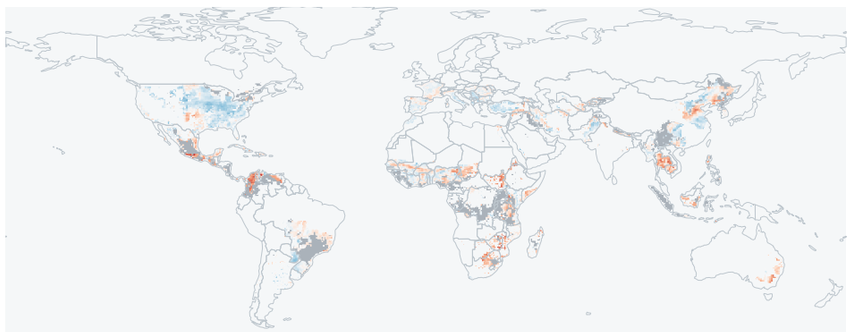

Daily Tmax ≥33.7 °C · ≥2 consecutive days

Grain filling

FIL

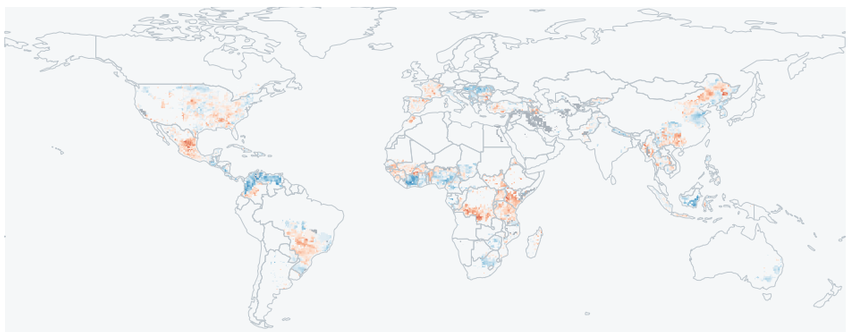

Daily Tmax ≥32.7 °C · ≥2 consecutive days

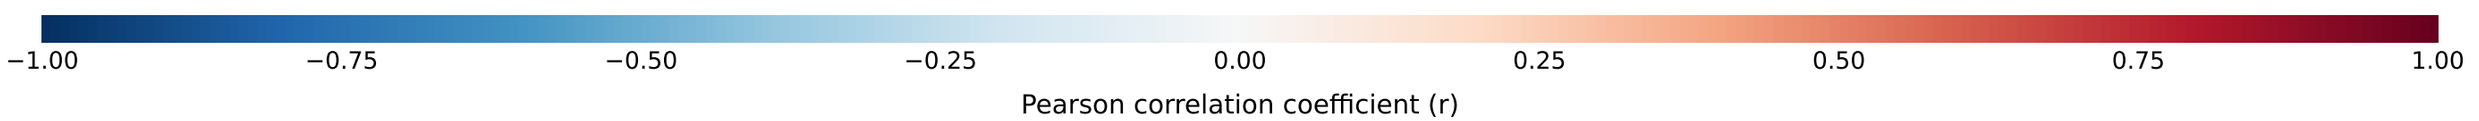

Maturation

MAT

Daily precipitation >10 mm · daily occurrences

Undefined correlation / insufficient data

Blue: higher ONI associated with fewer occurrences. Red: higher ONI associated with more occurrences.

Each coefficient compares annual phase counts with phase-matched ONI. Constant series are undefined, not zero.

Colors show association, not statistical significance, causation or forecast skill. ONI: ERSSTv6; no lag or trend adjustment.
